

BaseEngine Deployment Charter — Atom & Echo Ops System

CUSTOM OPERATING SYSTEM ARCHITECTURE & MONTHLY SUBSCRIPTION AGREEMENT

Prepared by BaseWorks for Sudeesh D S, Founder of Atom & Echo. This Charter establishes the Phase 1 deployment architecture, commercial terms, risk guarantees, and operating framework for Atom & Echo's custom business operating system.

1. System Mission & Philosophy

Atom & Echo is transitioning into a high-leverage, founder-led growth agency focused strictly on ambitious founders and high-tier personal branding. Today, that vision is constrained by manual operational drag: fragmented Notion databases where multi-client content calendars live in disconnected pages; severe client approval friction where busy executives refuse to log into Notion on mobile (delaying approvals by 1–2 weeks); client-specific SaaS tool costs (such as HeyReach or Clay, running Rs. 18,000–20,000/month for clients like Debtworks) tracked manually or forgotten in billing; and international SaaS cards failing under RBI e-mandate guidelines, abruptly halting client campaigns.

The BaseEngine Approach: BaseEngine turns Atom & Echo's real-world workflows into a custom-engineered operating system managed under a predictable monthly subscription. This is not generic agency software you have to adapt to. The system holds the knowledge instead of people, clients approve content in seconds from WhatsApp without logins, client tool expenses are automatically recovered on monthly invoices, and the founder gets time back to focus purely on distribution and high-value clients.

2. Commercial Model: The BaseEngine Subscription

BaseEngine delivers custom-built enterprise software with the financial simplicity of a SaaS subscription — pricing just like traditional software, but custom-made for 2026.

Parameter	BaseEngine Terms
Monthly Subscription	Rs. 20,000 / month flat. Predictable monthly operational cost. No hidden hourly fees.
Upfront CapEx / Build Fee	Rs. 0 (Zero). No lump-sum development charges. BaseWorks absorbs the initial engineering investment.
Subscription Start Clock	Billing starts strictly on the date of Official Phase 1 Sign-Off (Go-Live) . The build phase is completely free.

Dedicated Monthly Engineering	Includes 1 requested custom system evolution / feature per month (5–7 business days capacity) to keep the OS evolving as the agency scales.
Feature Rollover	Unused monthly engineering capacity rolls over continuously month-to-month.
Setup & Onboarding	Included. BaseWorks handles full historical data migration from Atom & Echo's Notion workspace.
Cloud Hosting & Infrastructure	Included. Enterprise-grade high-availability cloud hosting, automated database backups, security patches, and maintenance managed by BaseWorks.
Taxes & Invoicing	Billed as net. Currently non-GST applicable (standard commercial invoice issued).
Contract Flexibility	Month-on-month agreement. Cancel anytime with a 30-day prior written notice.
Third-Party API & Webhooks	• WhatsApp & Email Webhooks: Free tier limits utilized where possible. • AI / LLM APIs: Usage powered by BaseWorks framework; heavy custom third-party model overages (if client-specific models are utilized) connected via client environment keys.

3. The 3 Core BaseEngine Risk Guarantees

To ensure Atom & Echo operates with total security and zero platform lock-in:

100% DATA CONTROL	BUYOUT OPTION ANYTIME	FAIL-SAFE CODE HANDOFF
Atom & Echo owns all client records, post drafts, performance metrics, and financial records. Full raw JSON/CSV database exports are accessible on demand at any time.	While on subscription, BaseWorks maintains and continuously improves the OS. Atom & Echo holds the permanent option to buy full, permanent code ownership anytime.	If BaseWorks is ever unable to support the system, full source code repositories and deployment infrastructure credentials transfer directly to you with zero lock-in.

4. Phase 1 Deployment Architecture (What Gets Deployed)

Every module below is engineered around Atom & Echo's actual workflow, eliminating manual handoffs and fragmentation.

4.1 Master Multi-Client Content Engine

What it does: Replaces scattered Notion databases with one unified pipeline showing every scheduled, drafted, and published post across all agency clients (Debtworks, Florian, Bilal, Zainab, etc.).

Included: Multi-client monthly and weekly master calendar view; live status tracking (Idea -> In Development -> Under Review -> Ready to Publish -> Published); content format taxonomy (Text, Carousel, Video Script, Image); strategic content pillar tagging (Market Analysis, Client Testimonial, Industry Insight, Founder Story); direct markdown post editor with character counts and preview.

Onboarding: BaseWorks already has full Notion admin access; all existing client tags, content pillars, and drafts will be migrated directly by BaseWorks.

Deliberately Excluded from V1: Automated direct publishing via LinkedIn/X API (the agency maintains final publishing control).

4.2 Zero-Friction Client Review Portal (Mobile PWA + WhatsApp Gateway)

What it does: Eliminates Notion client review friction. Busy executives receive a formatted WhatsApp link, open a lightweight mobile web app without logging in, and approve content in 5 seconds.

Included: Client-facing, mobile-first Progressive Web App (PWA); direct secure tokenized URL access (zero usernames, passwords, or Notion accounts required); high-fidelity post preview (supporting carousels, images, and text formatting); one-click 'Approve' button that automatically flips post status to Ready to Publish; inline revision box for quick client comments and edits; automated WhatsApp notification trigger with the pre-generated review link.

Onboarding: Client contact numbers and review message copy extracted directly from Notion.

Deliberately Excluded from V1: In-app real-time messaging room (conversations remain on WhatsApp).

4.3 Client Relationship & Retainer Intelligence

What it does: Single source of truth for each agency client holding their active service tier, monthly post quota, target ICP, and milestone metrics.

Included: Dedicated client profile views; service tier tagging (LinkedIn Personal Branding, Outbound, Growth Strategy); monthly quota tracking (e.g., 10 vs. 20 posts/month target vs. delivered); client strategy hub (profile headline, about section guidelines, target audience notes); key milestone logger (follower growth milestones, viral post records).

Onboarding: Current client roster and profile notes extracted from Notion.

Deliberately Excluded from V1: Automated live web scraping of LinkedIn profile followers (metrics entered via standard monthly review or stats exports).

4.4 Automated Invoicing & Pass-Through Tool Billing

What it does: Stops revenue leakage by automating monthly retainer invoices and dynamically adding client-specific software expenses.

Included: Automated recurring invoice generation on client billing dates; automatic pass-through calculation of client-specific software costs (e.g., auto-billing Chetan for Rs. 18,000–20,000 of HeyReach/Clay tools without manual math); support for standard and GST invoice formats; payment status tracking (Draft, Sent, Paid, Overdue); one-click PDF generation and client email dispatch.

Onboarding: Billing details, invoice numbering prefix, and tool expense rules extracted from Notion.

Deliberately Excluded from V1: Payment gateway merchant checkout (clients pay via direct bank transfer/NEFT/UPI).

4.5 RBI Compliance Auto-Renewal Sentinel

What it does: Protects client campaigns from stopping unexpectedly due to Indian card auto-debit rejections under RBI e-mandate guidelines.

Included: SaaS subscription tracking dashboard mapped to specific clients and tools (HeyReach, Clay, Fathom, etc.); automated alert notification 48 hours prior to renewal date to ensure manual balance or card validation.

Onboarding: List of recurring tools, renewal dates, and billing cycles extracted from Notion Password Manager.

Deliberately Excluded from V1: Automated direct bank account balance funding.

4.6 Retainer Maturity & Renewal Radar

What it does: Proactively surfaces upcoming contract expirations so retainers are renewed on time.

Included: Client contract maturity countdown; automated reminder alert 30 days prior to retainer expiration; one-click contract extension and renewal logging.

Onboarding: Client start dates and contract lengths extracted from Notion.

Deliberately Excluded from V1: Cryptographic government e-signatures.

4.7 Meeting Note Topic-to-Post Pipeline

What it does: Captures weekly strategy call topics and turns them directly into content calendar items.

Included: Dedicated meeting notes log per client; structured agenda and call summary logger; one-click action to convert discussed topics directly into draft post cards on the calendar.

Onboarding: Existing meeting note templates extracted from Notion.

Deliberately Excluded from V1: Automated AI bot dial-in for unscheduled phone calls.

4.8 Agency OKR & Growth Command Center

What it does: Real-time visibility into agency revenue benchmarks without maintaining manual spreadsheets.

Included: Live MRR compilation from active client retainers; visual progress tracker against agency benchmarks (e.g., target of 10 personal branding clients at Rs. 50,000–60,000/month = Rs. 5L–6L MRR target); agency client capacity utilization indicator.

Onboarding: Target OKR figures extracted from Notion.

Deliberately Excluded from V1: Multi-entity corporate tax accounting.

4.9 Internal Team Roles & Access Control

What it does: Clean operational separation between leadership and execution.

Included: Admin Role (Sudeesh): Full access to billing, revenue metrics, tool costs, and client settings. Team Member Role (Nikhil): Access to content calendar, post drafting, client review queues, and meeting notes.

Onboarding: Team email addresses configured during setup.

Deliberately Excluded from V1: Complex multi-layered enterprise permissions.

4.10 Atom & Echo Kinetic Brand Identity & SVG Loader

What it does: Elevates the platform into an inspiring, high-end daily workspace.

Included: Custom Atom & Echo brand color palette and dark/light interface themes; dynamic animated SVG logo integration ('Atom bursting into an Echo') on initial login and system transitions.

Onboarding: Sudeesh provides the animated SVG asset file.

Deliberately Excluded from V1: External public agency website redesign.

5. Continuous Monthly Evolution (How Monthly Sprints Work)

In traditional software, delivery marks the end of development and leaves you with static code. Under BaseEngine, your operating system is alive and continuously evolving.

- **Dedicated Monthly Engineering Capacity:** Each month, BaseWorks reserves 5–7 business days of engineering capacity to build requested additions for Atom & Echo.
- **Simple Scoping:** Sudeesh submits a request -> BaseWorks outlines the build time in business days -> If it fits within the monthly box, it is built as that month's included feature.
- **Continuous Rollover:** Unused monthly engineering capacity rolls over month-to-month without expiring.
- **Scope Protection:** Features larger than the monthly box are scoped and quoted separately in advance — never surprise charges after the fact.

Future Roadmap Candidates (Phase 2+): AI Meeting Audio-to-Draft Engine (Fathom audio parsing into first-draft LinkedIn carousels); Automated Case Study & Custom Pitch Generator (one-click custom proposals using client proof of work like Debtworks' 1.5M impressions to close leads like Nishant); and Passive Thought-Capture Agents for voice cloning.

6. Onboarding & Zero-Friction Setup

Because BaseWorks already has administrative access to Atom & Echo's Notion workspace, Sudeesh does not need to fill out spreadsheets or gather manual exports. BaseWorks directly extracts and migrates client databases, active contracts, master content pillars, post templates, tool billing details, password manager schedules, and OKR benchmarks.

Item Required from Sudeesh	Purpose / Module	Target Date
Animated SVG logo asset file	Kinetic Brand Loader (4.10)	September 20, 2026
WhatsApp Webhook / Gateway preference	Client Approval Portal (4.2)	September 21, 2026
V1 Draft Review & Feedback	V1 Staging Testing & Iteration	September 23, 2026

7. Timeline, Milestones & Activation

- **Build Sprint (Free Phase):** BaseWorks commits engineering resources to develop Phase 1 with Rs. 0 upfront fee. Subscription billing remains paused throughout the build phase.
- **Milestone 1 — V1 Working Draft: September 23, 2026.** Sudeesh tests the functional master calendar, mobile client approval portal, and invoicing interface on a secure staging environment.
- **Milestone 2 — Final Phase 1 Deployment: Within 18 calendar days (~October 3–4, 2026).** Complete deployment, live onboarding, and team transition off Notion.
- **Subscription Start Clock:** Month 1 billing (Rs. 20,000/month) officially activates strictly on the date of **Official Sign-Off (Go-Live)**.
- **Staging Isolation:** During development, the platform is hosted on a secure staging URL. Live domain connection occurs upon Go-Live.
- **Payment Terms:** Monthly subscription invoices are issued on the 1st of each month with a 10 business-day grace period.

Charter Acceptance & Service Agreement

By signing below, the parties confirm the scope, deployment architecture, commercial terms, and operating principles outlined in this BaseEngine Deployment Charter.
